EVIDENCE REVIEW

PickMe Android Accessibility Audit

Findings and coverage limitations

5 FINDINGS

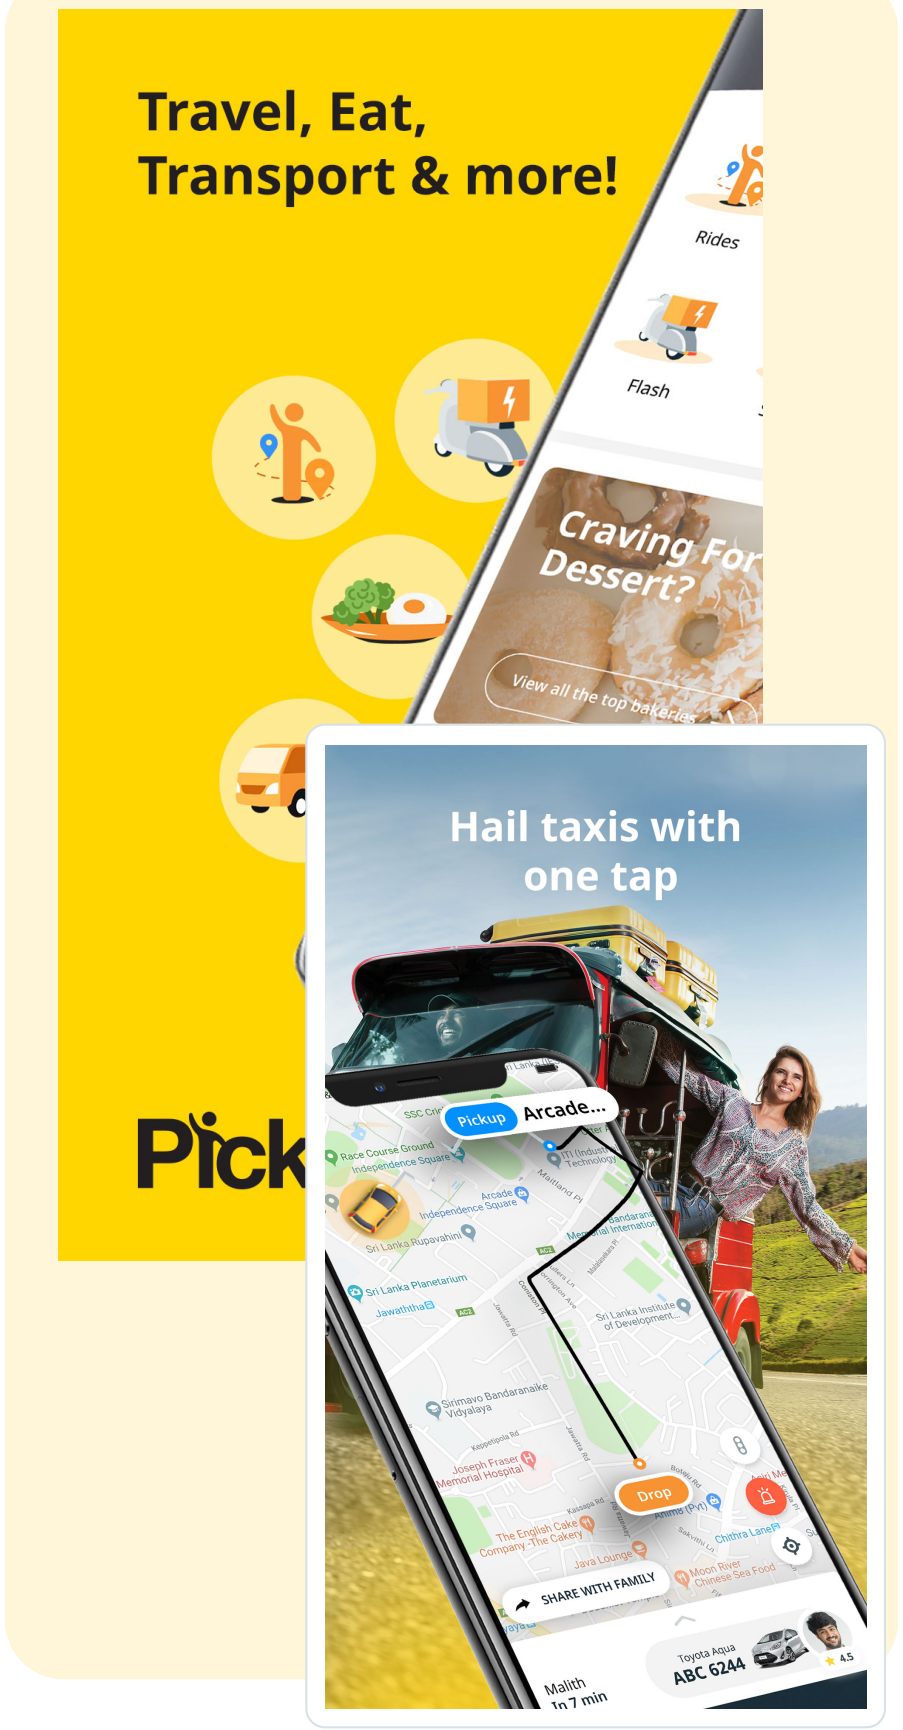

12 CATEGORIES

A visual review of the barriers evidenced in the supplied APK, home screenshot and TalkBack recording.

MAIN SIGNAL

Important account and route controls are spoken as technical identifiers where users need meaningful names and values.

Scope: one device, one build and sampled journeys. The report identifies issues and priorities; it does not certify app-wide conformance.

Promotional imagery: PickMe on Google Play. Context only; not audit evidence.

TEST DEVICE	ANDROID	APP VERSION
HONOR X7c	**14**	**26.100.0-LkPrd**

Prepared 4 November 2026. Spoken-label conclusions remain provisional pending a controlled retest.

EXECUTIVE SUMMARY

TL;DR / what matters most.

01 Five findings warrant attention: two high-priority spoken-name barriers, one medium-priority speech-usability observation and two medium-priority contrast concerns.

02 The strongest functional concern is whether people can identify Account actions and understand pickup/destination fields through speech alone.

03 Prioritise meaningful accessible names and route-field values, then reduce redundant focus stops and improve text contrast.

04 The report covers all 12 requested categories and records 72 subtopics. Many checks remain untested; coverage is not proof of conformance.

Bottom line: start with spoken names and route-field values. Treat the five findings as evidence-based priorities, with the qualifications shown on each issue page.

Explore findings | Read methodology | WCAG assessment

No global accessibility score or app-wide conformance claim is made. Two high scores are provisional; low-contrast measurements are estimates from video.

INTRODUCTION AND CONTEXT

Purpose, platform and scope.

Why this review

Independent access to transport and everyday services depends on people being able to discover actions, understand information and complete tasks using their preferred input and assistive technology.

Audit objectives

The objectives are to document reproducible concerns, explain their potential effects on users, relate them to relevant WCAG 2.2 criteria and give developers clear corrections and retest steps.

About PickMe

PickMe is a Sri Lankan digital services platform operated under the brand of Digital Mobility Solutions Lanka PLC. Its official website describes ride-hailing, food delivery, parcel delivery and logistics services. [R8]

The interface in this build

In the supplied build, Home displays Rides, Food, Market, Explore, Rentals, Delivery, Trucks and Scan N' Go, alongside destination search, promotional cards and bottom navigation. This inventory describes the captured interface; it does not imply that every service journey was tested.

Evidence boundaries

This audit examines accessibility concerns evidenced in PickMe Android build 26.100.0-LkPrd. It combines a supplied XAPK, a home-screen screenshot and a user-recorded TalkBack exploration. It focuses on barriers that can be traced to visible or spoken evidence, rather than making an app-wide judgement from a small sample.

RESEARCH METHOD

Research design and evaluation method.

Single-app descriptive case study

Evaluation method: standards-based accessibility inspection. The data are the supplied APK, screenshots and recorded TalkBack exploration.

Evaluation method

Standards-based accessibility inspection against relevant WCAG 2.2 A/AA criteria, interpreted for native software using WCAG2ICT.

Analysis approach

Qualitative review of visible interactions and spoken output, supported by descriptive contrast measurements and machine-assisted speech transcription.

Study boundary

An inspection of supplied evidence, not a participant usability experiment, interview study, systematic literature review or complete compliance certification.

Inspection procedure

01 **Establish the sample**

Record app/device versions and identify the supplied evidence; retain unknown TalkBack settings as limitations.

02 **Inspect the APK statically**

Inspect package/manifest metadata and bundled layouts. Do not infer runtime failures from missing XML attributes.

03 **Trace screens and interactions**

Trace screens, visible focus and transitions using sampled frames and targeted image inspection.

04 **Review speech evidence**

Use two local transcription passes to corroborate repeated speech patterns; retain approximate wording/timing.

05 **Measure sampled visual contrast**

Calculate sampled text/background contrast; require original-image confirmation for final outcomes.

06 **Map, prioritise and report**

Map candidate criteria, separate severity from certainty, document recommendations and classify all 72 subtopics.

FINDINGS AT A GLANCE

Start with the highest-impact barriers.

Select a finding to open its visual evidence page.

ACC-001

HIGH / 3

Account menus lack meaningful spoken names

Account actions are hard to identify from speech.

04:22-05:13

ACC-002

HIGH / 3

Route fields do not speak useful content

Pickup and destination fields need clearer names/values.

09:00-09:23

ACC-003

MEDIUM / 2

Home speech contains identifier noise

Extra technical output adds listening and navigation effort.

01:28-02:01

ACC-004

MEDIUM / 2

Destination-search text is faint

Sampled contrast is approximately 2.41:1.

01:52

ACC-005

MEDIUM / 2

Check labels blend into the button fill

Sampled contrast is approximately 1.69-2.12:1.

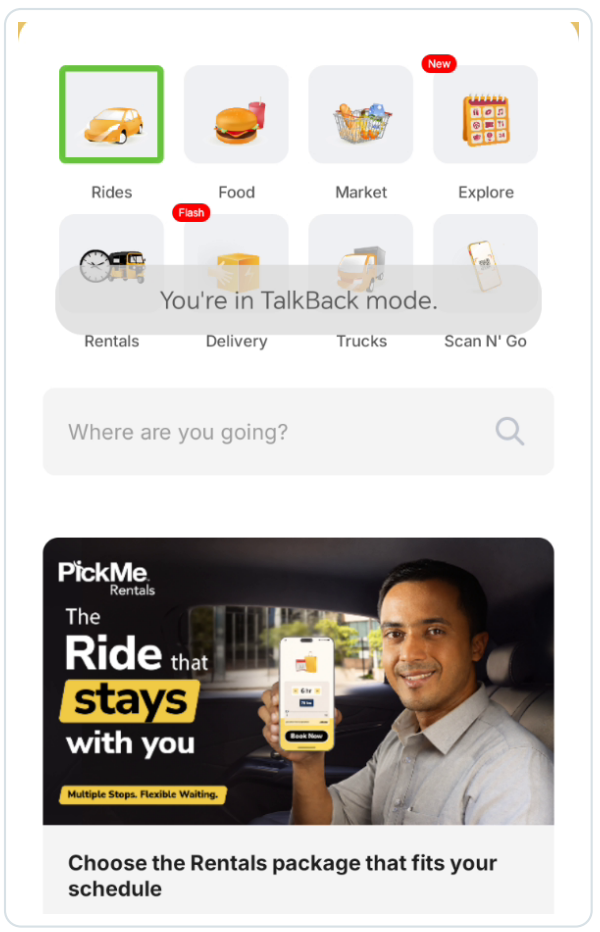

02:02

Read the evidence status with the score. High scores are provisional. Home identifier noise is a usability observation; contrast values are estimates from video frames.

JOURNEY COVERAGE

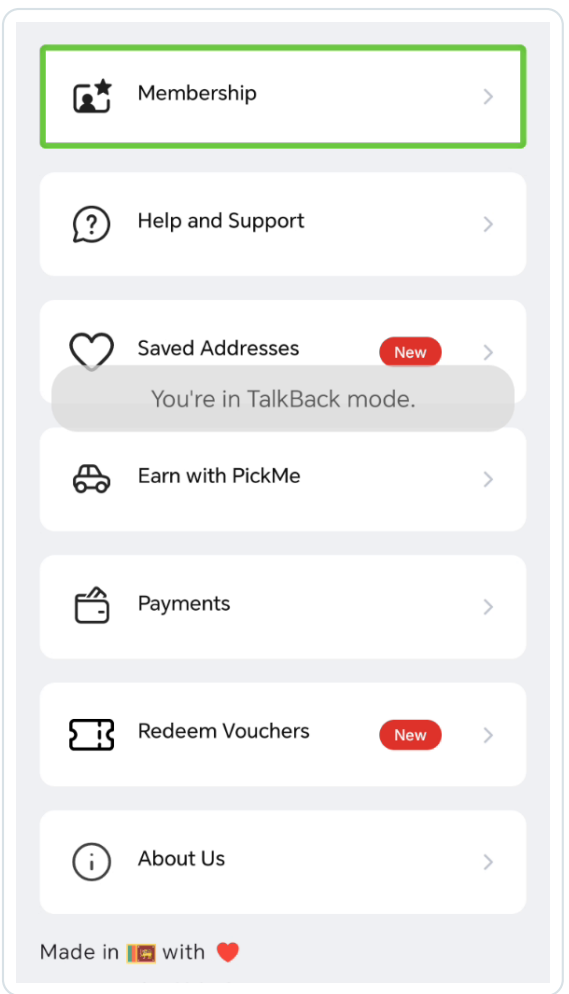

Where the recording takes us.

Screens reached are not the same as tasks completed.

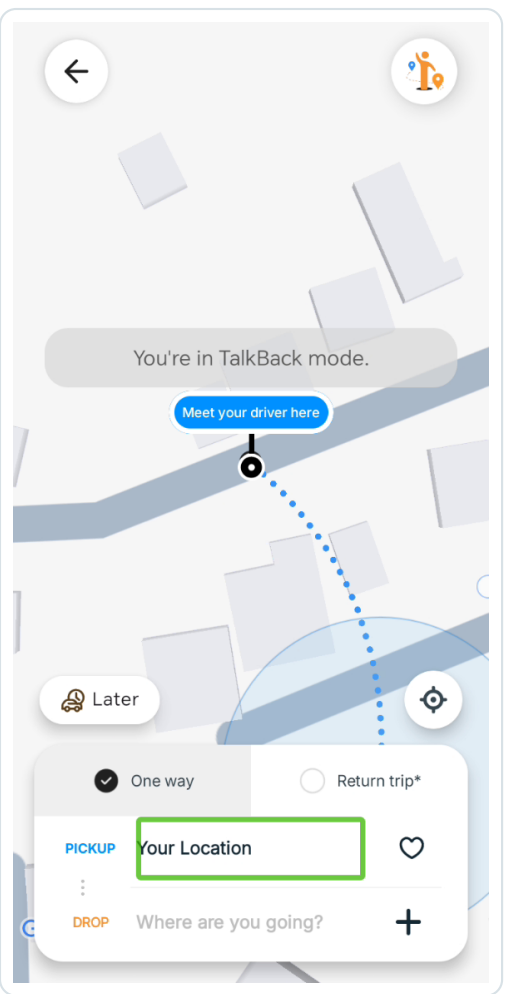

HOME

Services + search

ACCOUNT

Menu exploration

RIDES

Initial route fields

OBSERVED

Home exploration; Account; About Us and Legal/Terms; empty Notifications and Activities; initial ride screen.

NOT COMPLETED

Destination query and result selection; vehicle/fare review; booking, payment, cancellation and confirmation.

OTHER SERVICES

Food, Market, Explore, Rentals, Delivery, Trucks and Scan N' Go entry points are visible. Their individual journeys were not exercised.

OTHER INPUT MODES

Switch Access, Voice Access, external keyboard, magnification, larger font/display settings and landscape remain untested.

USER IMPACT

How the barriers may affect users.

Blind screen-reader users

Technical or numbered names can make destination identification uncertain. Missing useful field content may leave users unsure what is selected or which action will edit it. Assistance is a plausible consequence; it was not measured.

People with low vision

Faint prompts and white text over bright gradients may make key entry points harder to read. The contrast estimates indicate a concern requiring original-image confirmation.

People with cognitive or learning differences

Unnecessary technical speech and extra focus stops can increase memory and listening demands. This effect is inferred from the interface output, not demonstrated in participant testing.

People using voice, switch or keyboard input

Names and node grouping may also matter for these input modes, but compatibility cannot be inferred from TalkBack alone. They require separate sessions.

Interpretation, not participant evidence. This audit contains no measured task success, completion time, or participant statements. Potential reliance on assistance is inferred, not demonstrated.

FINDING 01 / SPOKEN NAMES

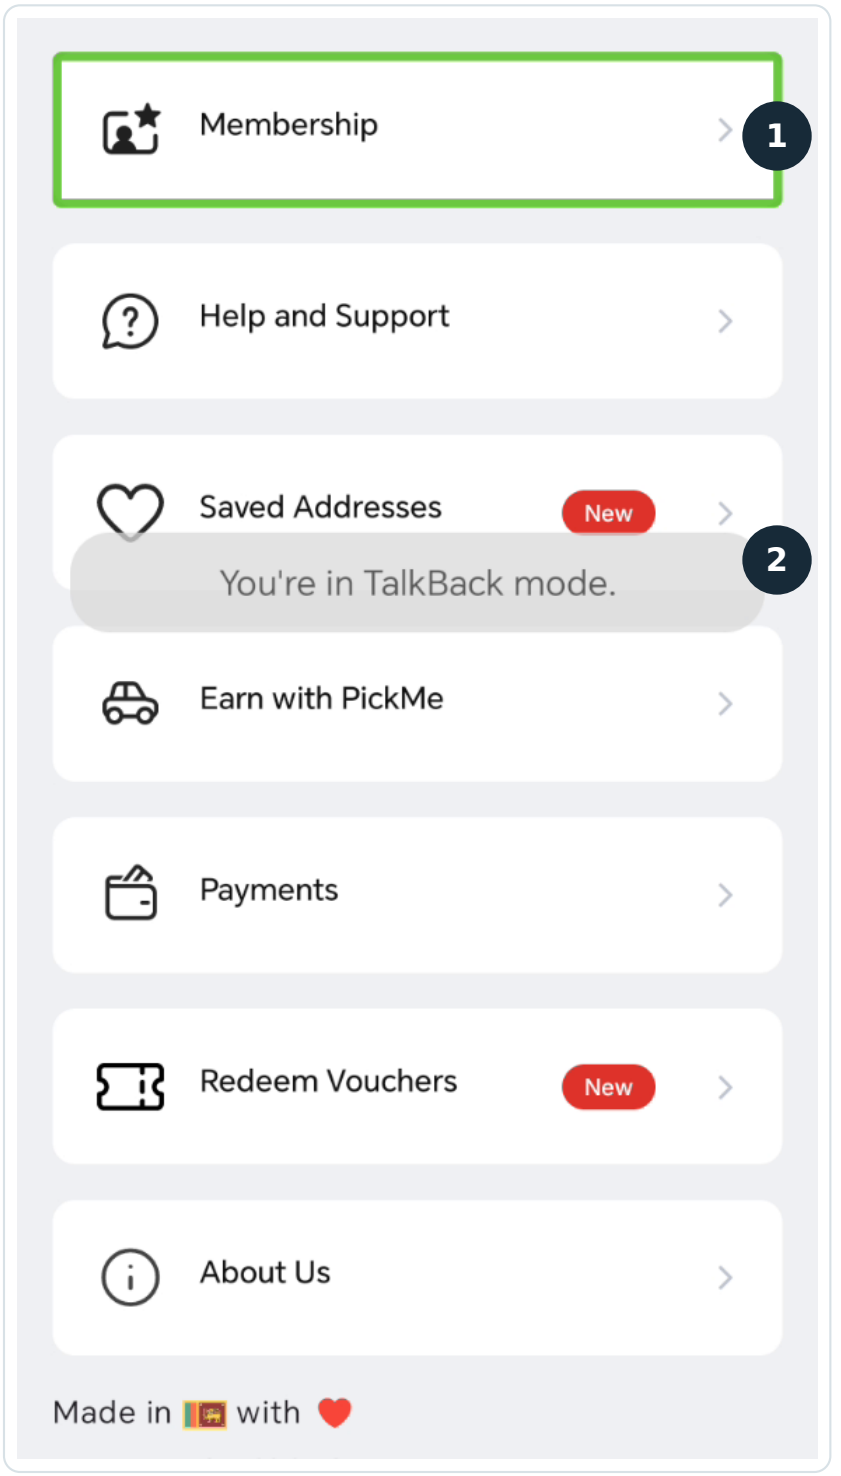

Reproduce & retest >

Account menus need clearer names.

HIGH / 3 OF 4

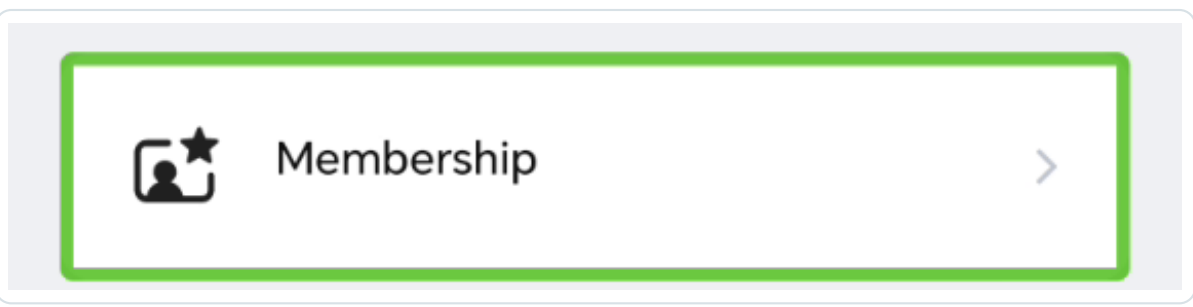

PROVISIONAL

Menu names are visible, but the sampled speech uses numbered service identifiers.

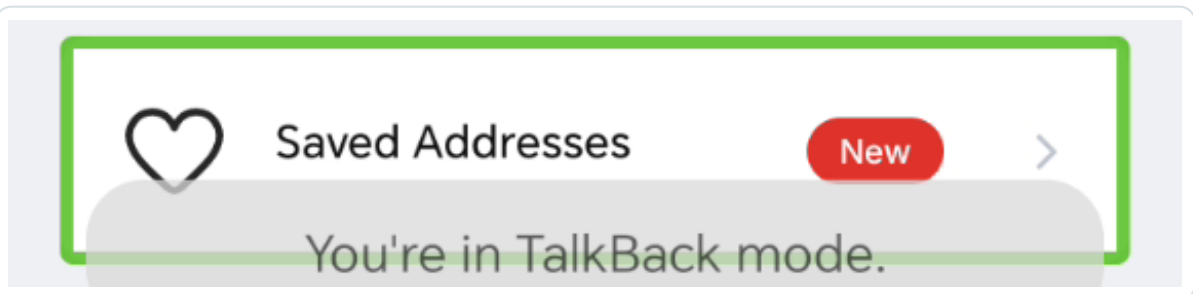

E01 · 04:27.5 · Account menu.
Green rectangle = current TalkBack focus.

1 / VISIBLE LABEL

Membership is the label users see.

2 / ANOTHER AFFECTED ROW

Saved Addresses is also visible on screen.

SPEECH EVIDENCE

"BTN underscore ... service underscore zero"

Similar numbered output occurs on subsequent menu rows.

Machine-transcribed excerpt; identifier spelling is approximate. Listen to A01 for the source audio.

WATCH VIDEO / CLICK

04:22-05:13

Frames E01, E02, E10, E11; audio A01 | Source recording: 09:40
Opens YouTube at the stated time. PDF video playback uses an external link.

Expected: "Membership, button" and "Saved Addresses, button". Expose one meaningful actionable node per row; keep resource IDs and decorative chevrons out of speech.

Candidate criteria: 4.1.2 Name, Role, Value; 2.5.3 Label in Name. Retest with element-ID speech off and capture node names before finalising.

FINDING 02 / ROUTE ENTRY

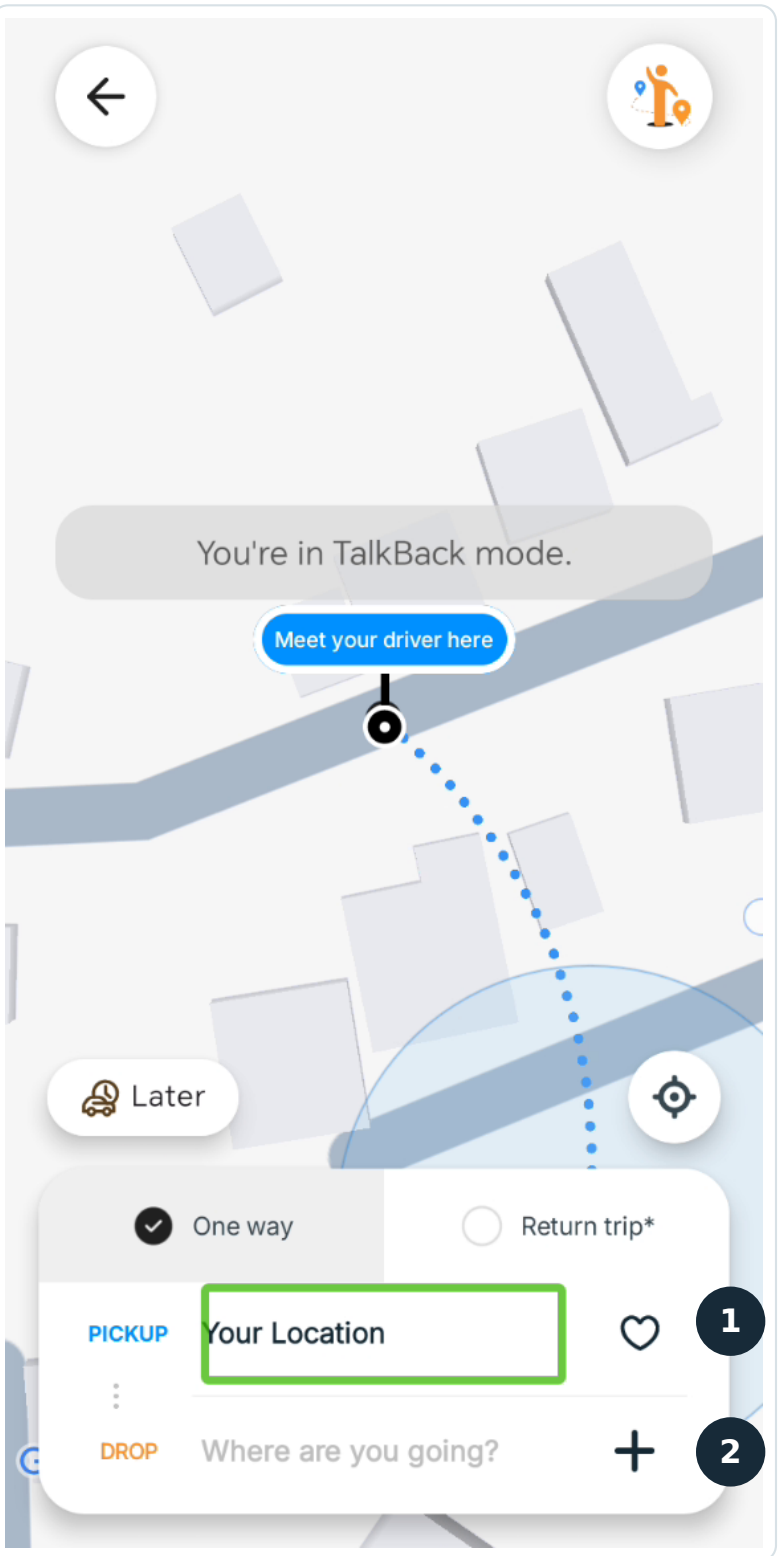

Reproduce & retest >

Route fields need useful spoken content.

HIGH / 3 OF 4

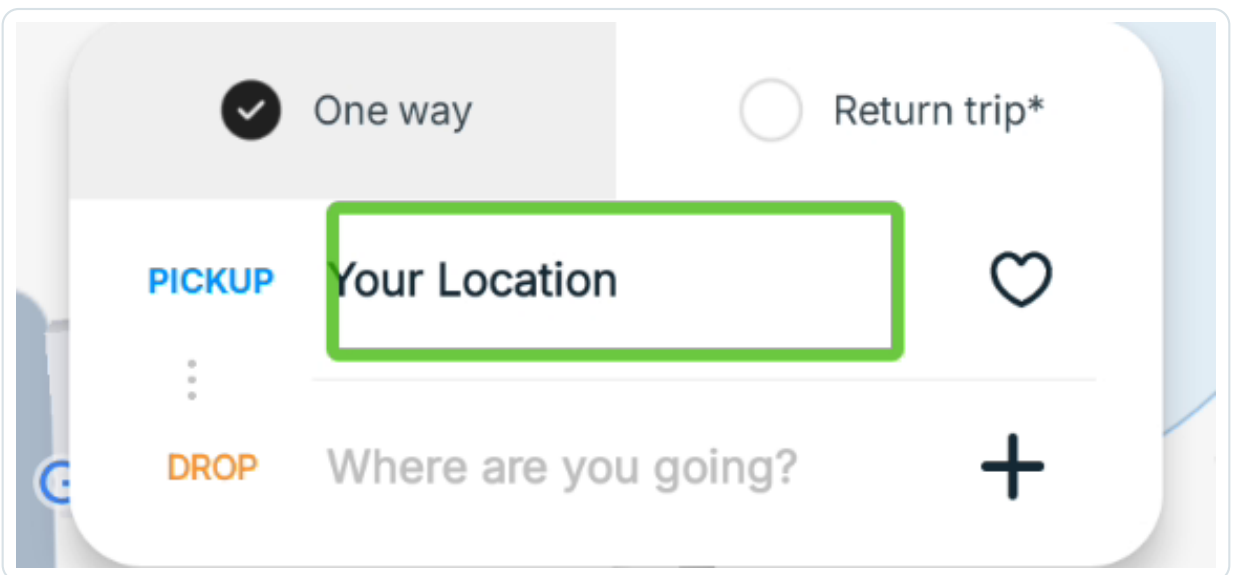

PROVISIONAL

The recording reaches the fields but does not complete destination entry.

E03 · 09:07.5 · Ride screen.
Map and route controls in context.

ENLARGED ROUTE PANEL

SPEECH EVIDENCE

Pickup: "TXT underscore pickup underscore location"

Drop-off: "TXT underscore drop underscore location"

The sampled speech does not include the visible "Your Location" value or "Where are you going?" prompt.

WATCH VIDEO / CLICK

09:00-09:23

Frames E03, E04, E12; audio A02 | Source recording: 09:40
Opens YouTube at the stated time. PDF video playback uses an external link.

Expected: announce each field's label, current value/empty state and action. Example: "Destination, not set, button". Verify typed search and list selection work without map dragging.

Candidate criteria: 4.1.2 and 2.5.3. Functional impact and workaround remain unverified because no route was submitted.

FINDING 03 / NAVIGATION EFFORT

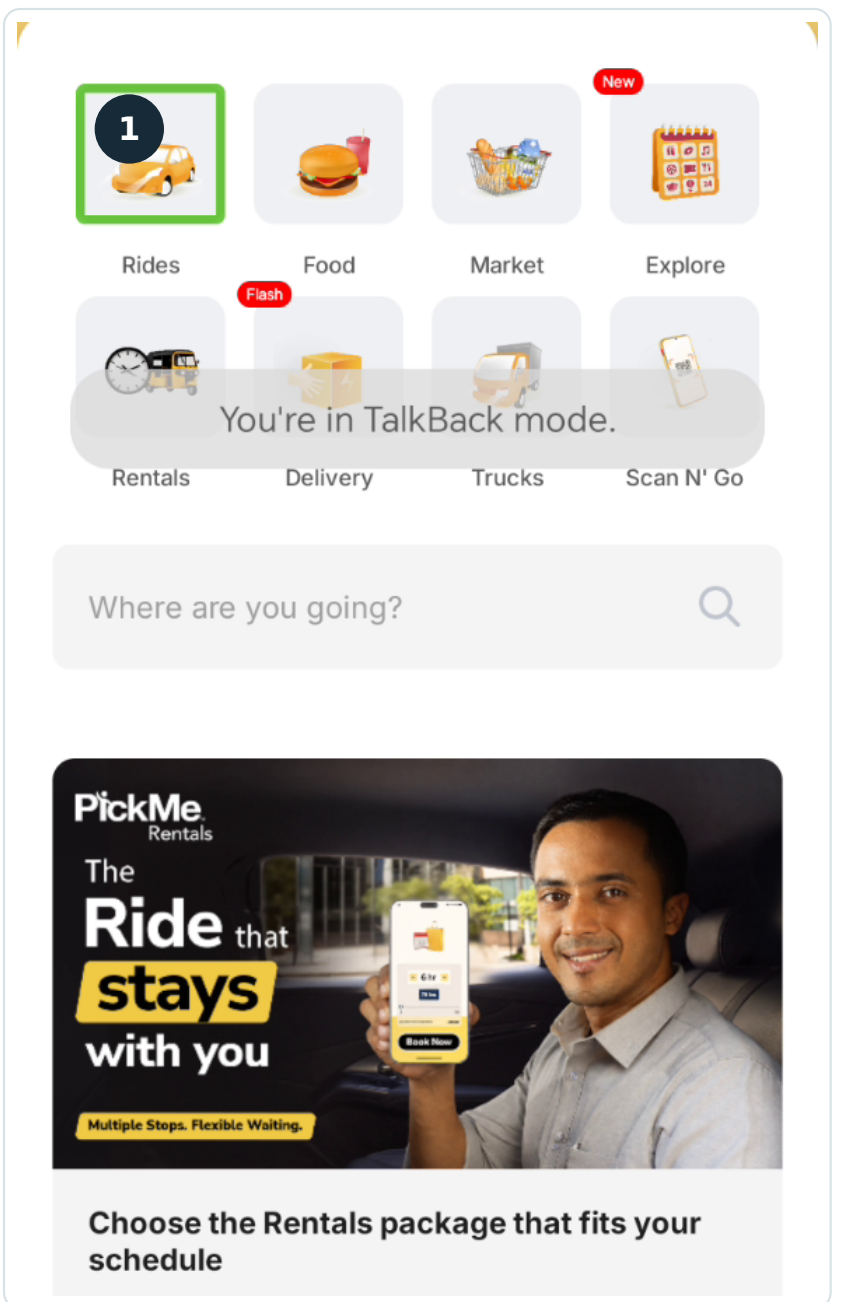

Reproduce & retest >

Home speech adds unnecessary effort.

MEDIUM / 2 OF 4

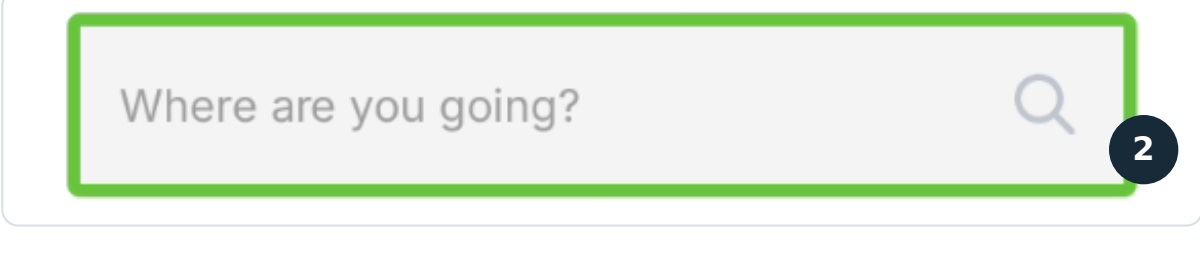

USABILITY OBSERVATION

Technical identifiers and separate icon stops add effort, even where useful labels also follow.

E08 · 00:47.5 · Rides tile receives focus.
Some service names are spoken correctly.

DESTINATION SEARCH / SEPARATE FOCUS

SPEECH SEQUENCE / 01:28-02:01

1. "BTN underscore search"
2. "Where are you going?"
3. "IMG underscore search"

This pattern suggests redundant or unhelpfully named nodes. The exact node structure and TalkBack settings still need checking.

Identifier output alone does not establish a WCAG failure when the correct accessible name is also available.

WATCH VIDEO / CLICK

01:28-02:01

Frames E05, E08, E13; audio A03 | Source recording: 09:40
Opens YouTube at the stated time. PDF video playback uses an external link.

Expected: one concise announcement per action. Group each tile's icon and label. Remove redundant decorative focus stops while preserving useful roles and selected states.

Investigate: 4.1.2 Name, Role, Value and 1.3.1 Info and Relationships. Re-run sequential swipes with uninterrupted speech.

FINDING 04 / VISUAL ACCESS

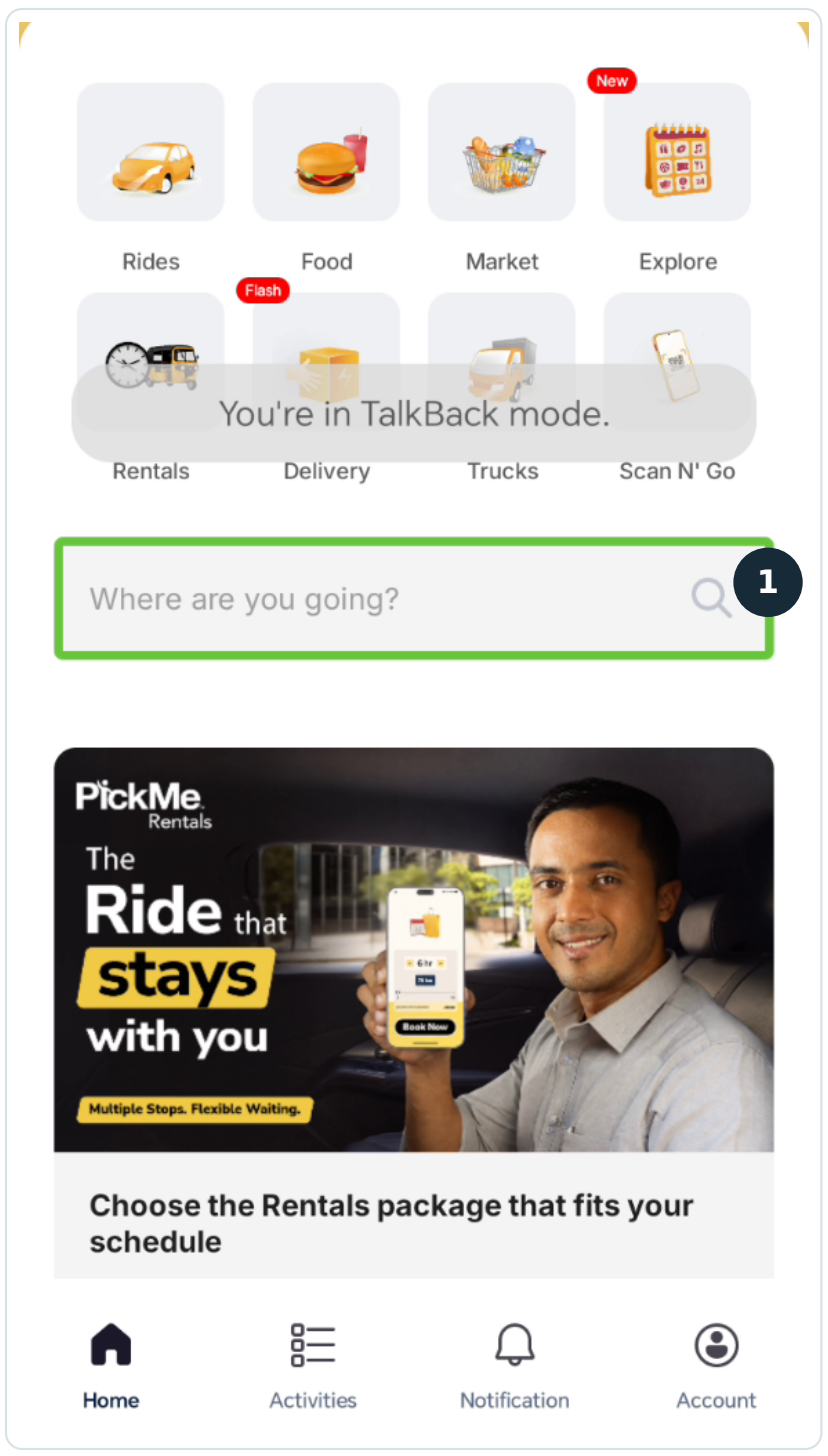

Reproduce & retest >

The destination prompt is hard to read.

MEDIUM / 2 OF 4

VIDEO-BASED MEASUREMENT

Light-grey text sits on a light-grey field at the primary search entry point.

1 / ENLARGED TEXT SAMPLE

Where are you going?

2.41 : 1

estimated contrast

TEXT #9F9F9F

FILL #F4F4F4

Reference target

4.5:1 for normal text.

3:1 for qualifying large text.

The sample is below both thresholds.

E05 · 01:37.5 · Search in context.
The focus outline does not improve text contrast.

WATCH VIDEO / CLICK

01:52

Frames E06; original frame 01:52.5 | Source recording: 09:40
Opens YouTube at the stated time. PDF video playback uses an external link.

Recommendation: darken the prompt or change the field fill. Re-measure the original screenshot/design colours, then check large-text and display settings.

Criterion: 1.4.3 Contrast (Minimum), AA. Video compression/resizing may alter colour values; treat the ratio as an estimate.

FINDING 05 / VISUAL ACCESS

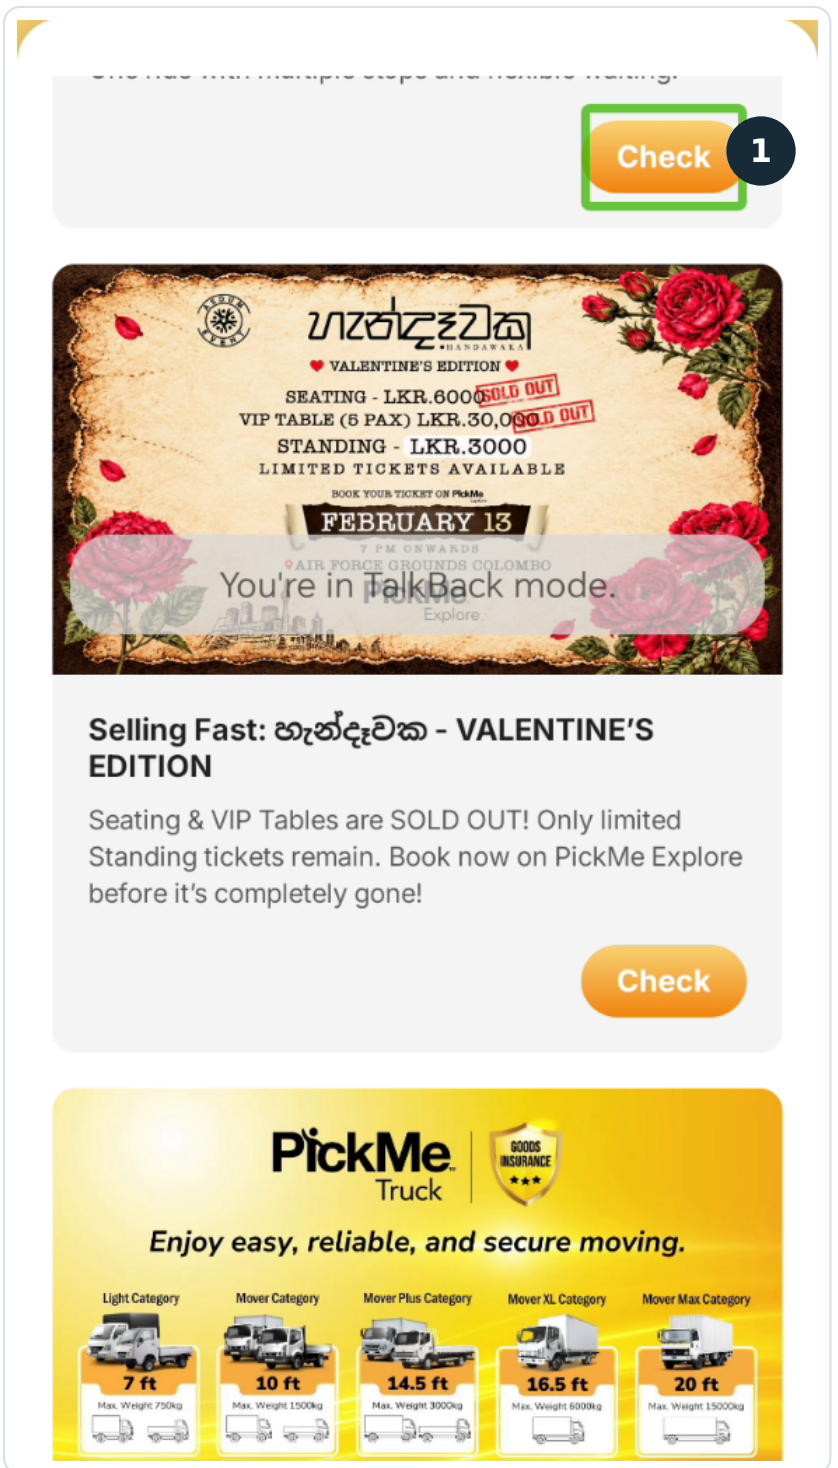

Reproduce & retest >

White labels blend into the button fill.

MEDIUM / 2 OF 4

VIDEO-BASED MEASUREMENT

The active Check button uses white text over a bright yellow-orange fill.

1 / ENLARGED ACTION

1.69-2.12 : 1

Estimated contrast across three adjacent gradient samples at text height.

Each sample is below 3:1 and 4.5:1. A gradient must maintain adequate contrast beneath every part of the label.

E09 · 02:02.5 · Promotional card context.
The upper Check button has TalkBack focus.

WATCH VIDEO / CLICK

02:02

Frames E07, E09; original frame 02:02.5 | Source recording: 09:40
Opens YouTube at the stated time. PDF video playback uses an external link.

Recommendation: use sufficiently dark text or a darker fill. Test the full gradient and focused/pressed states using original screenshots or design colours.

Criterion: 1.4.3 Contrast (Minimum), AA. These are adjacent video-frame samples, not the original background beneath every glyph.

WCAG ASSESSMENT / 1 OF 2

Criterion outcomes and open checks.

WCAG 2.2 A/AA interpreted using WCAG2ICT. This is a selected-criteria assessment, not a complete conformance checklist.

4.1.2 / A — **Candidate failure**

Name, Role, Value

ACC-001 / ACC-002 - Meaningful spoken names/values appear absent in the sampled output. Inspect runtime accessibility nodes and retest settings.

2.5.3 / A — **Candidate failure**

Label in Name

ACC-001 / ACC-002 - Visible menu labels and route-field content are not represented in sampled announcements. Compare actual accessible names with visible text.

1.4.3 / AA — **Sampled concern**

Contrast (Minimum)

ACC-004 / ACC-005 - Approx. 2.41:1 for search and 1.69-2.12:1 for Check samples. Confirm original colours and active states.

1.3.1 / A — **Needs investigation**

Info and Relationships

ACC-002 / ACC-003 - Label/value association and grouping require a runtime node-tree review. Identifier noise alone is insufficient to fail.

1.1.1 / A — **Not determined**

Non-text Content

Promotional images / icons - The clip does not establish whether every informative image has an equivalent or is correctly decorative.

2.1.1 / A — **Not tested**

Keyboard

All sampled screens - No external-keyboard session.

Status matters: candidate failure needs confirmation; sampled concern needs original-image validation; not tested is not a fail or a pass.

WCAG ASSESSMENT / 2 OF 2

Criterion outcomes and open checks.

WCAG 2.2 A/AA interpreted using WCAG2ICT. This is a selected-criteria assessment, not a complete conformance checklist.

2.5.8 / AA — Not tested

Target Size (Minimum)

Interactive controls - Video pixels do not establish actual target bounds or the WCAG spacing exceptions. Android dp and CSS pixels are not interchangeable.

4.1.3 / AA — Not tested

Status Messages

Loading / updates - No controlled verification of status announcements.

1.4.4 / AA — Not tested

Resize Text

Text and layout - No increased font-size recording.

1.3.4 / AA — Not tested

Orientation

Layout - Portrait only.

3.3.1 / A — Not tested

Error Identification

Forms / search - No invalid-input or validation sequence.

Status matters: candidate failure needs confirmation; sampled concern needs original-image validation; not tested is not a fail or a pass.

REMEDIATION PRIORITIES

Fix names first. Then validate visual access.

01

Meaningful spoken destinations

Account menu + pickup/drop-off

Use visible localised names, useful values and actionable roles. Inspect runtime nodes. Retest Account and route entry with element-ID speech disabled.

02

Less speech and fewer unnecessary stops

Home services + search + promotions

Group action icons with their labels. Hide decorative nodes. Preserve selected tab states. Repeat a slow sequential swipe pass.

03

Readable prompts and actions

Destination search + Check buttons

Measure original screenshots/design colours. Validate text contrast across backgrounds and gradients. Repeat in all supported states and larger display settings.

HOW TO READ THE SCORE

4 Critical - essential task blocked; no accessible workaround.
3 High - major barrier in an important task.
2 Medium - substantial extra effort or difficulty.
1 Low - localised difficulty with limited impact.

Custom impact scores are separate from WCAG A/AA/AAA. High scores remain provisional until task completion and workarounds are tested.

FINDING DETAILS / 1 OF 2

Reproduce, understand and verify.

ACC-001 / Account menu

Potential impact: Numbered identifiers make menu destinations hard to identify through speech; assistance or memorisation may be needed.

Reproduce: Open Account, scroll to the service menu and swipe through Membership, Help and Support, and Saved Addresses.

Retest: Capture TalkBack speech with element-ID speech off. Match each visible name to the runtime node name and verify activation without relying on screen position.

ACC-002 / Ride pickup and destination

Potential impact: Users may not understand the current route fields or how to edit them. The recording does not prove booking is impossible.

Reproduce: Open Rides and focus the Pickup and Drop labels, their displayed values/prompts, and adjacent controls.

Retest: Activate each field, type a public destination, select a result and return. Verify purpose, value, focus return and error announcements.

Impact interpretations are not participant findings. Use the full issue register for complete categories, criteria and evidence details.

FINDING DETAILS / 2 OF 2

Reproduce, understand and verify.

ACC-003 / Home services and search

Potential impact: Extra identifier speech and redundant stops add listening effort. Some useful service names and tab roles are spoken.

Reproduce: Swipe slowly through service tiles, search and the first promotion; let each announcement finish.

Retest: With element-ID speech off, inspect grouping and child focusability. Preserve meaningful labels and roles while removing decorative stops.

ACC-004 / Home destination prompt

Potential impact: Low contrast may make the primary search entry hard to notice or read for low-vision users.

Reproduce: Inspect the active destination prompt in an original, uncompressed Home screenshot.

Retest: Measure solid text/background colours, confirm at least 4.5:1 for normal text, and recheck at larger font/display sizes.

ACC-005 / Home Check buttons

Potential impact: White text on the bright gradient may obscure the promotional action label.

Reproduce: Capture the focused Check button and its default and pressed states without video compression.

Retest: Measure contrast across the entire gradient beneath the label. Verify at least 4.5:1 for normal text and review all states.

Impact interpretations are not participant findings. Use the full issue register for complete categories, criteria and evidence details.

COVERAGE / 1 OF 4

Every requested subtopic is accounted for.

Issue = evidence of a concern. Partial = incomplete check. Not tested is not a failure.

Screen Reader Compatibility

TalkBack support	**Partial**	Focus navigation and screen transitions recorded; ACC-001/002/003; no global pass.
Accessibility labels	**Issue**	ACC-001/002; node/settings confirmation pending.
Content descriptions	**Partial**	ACC-003; image alternatives not fully verified.
Reading order	**Partial**	Sampled visual focus sequence only; no exhaustive sequential run.
Spoken feedback	**Issue**	ACC-001/002/003; machine-transcribed audio.
Announcements	**Partial**	Some screen/role announcements transcribed; completeness unverified.
Decorative elements	**Partial**	Icon/promo focus observed; decorative vs informative classification unresolved.

Navigation & Interaction

Swipe navigation	**Partial**	Many controls reached; no exhaustive reachability test.
Focus management	**Partial**	Navigation shown; modal and return-focus behaviour not fully tested.
Logical focus order	**Partial**	ACC-003; exact swipe/touch input sequence not available.
Keyboard navigation	**Not tested**	No external keyboard session.
Back navigation	**Observed**	Return from legal pages and ride screen visible; not every state.
Gesture alternatives	**Not tested**	No drag, multi-pointer or map alternative completion test.

Visual Accessibility

Color contrast	**Issue**	ACC-004/005; approximate recording measurements.
Text readability	**Partial**	Recorded default appearance; ACC-004/005.
Font scaling	**Not tested**	No increased system font-size recording.
Screen magnification	**Not tested**	No magnification session.
Color independence	**Not tested**	No systematic state/meaning review.
Non-text contrast	**Not tested**	Control boundaries/icons not measured.

COVERAGE / 2 OF 4

Every requested subtopic is accounted for.

Issue = evidence of a concern. Partial = incomplete check. Not tested is not a failure.

Touch Accessibility

Touch target sizes	**Not tested**	Video pixels cannot establish actual touch bounds or dp.
Spacing	**Not tested**	Requires actual interactive bounds/device metrics.
Accidental activation	**Not tested**	No pointer-cancellation or activation test.
Complex gestures	**Not tested**	No gesture-dependent action exercised.
Dragging alternatives	**Not tested**	Map/drag alternatives not completed.

Forms & Input Accessibility

Input labels	**Issue**	ACC-002; route-field speech sampled.
Required fields	**Not tested**	No form submission.
Error identification	**Not tested**	No invalid/missing input exercise.
Error suggestions	**Not tested**	No validation/recovery exercise.
Autocomplete	**Not tested**	No typed search or OTP session.
Accessible validation	**Not tested**	No validation events.

Dynamic Content & Feedback

Loading indicators	**Partial**	Activities loading appearance briefly visible; speech/status unverified.
Status messages	**Not tested**	No controlled status-message event.
Pop-ups	**Partial**	Launch promotion appears; close control receives focus. Full containment untested.
Dialogs	**Not tested**	No app confirmation/error dialog tested.
Notifications	**Partial**	Empty Notifications page opened; delivery/readout untested.
Live updates	**Not tested**	No live driver, price or route updates.
Focus changes	**Partial**	Some transitions visible; not enough to pass focus restoration.

COVERAGE / 3 OF 4

Every requested subtopic is accounted for.

Issue = evidence of a concern. Partial = incomplete check. Not tested is not a failure.

Content & Information Structure

Headings	**Partial**	Legal headings visually present; heading navigation not tested.
Meaningful labels	**Issue**	ACC-001/002/003.
Button names	**Issue**	ACC-001/002; other controls sampled only.
Instructions	**Partial**	Map meet-up message visible and transcribed; no comprehension test.
Icon descriptions	**Partial**	ACC-003; unlabeled speech near ride transition needs precise attribution.
Language identification	**Not tested**	English appearance only; no node-language/localisation tests.

Maps & Location Accessibility

Map alternatives	**Not tested**	No completed text/list route-selection test.
Accessible location selection	**Partial**	ACC-002; actual selection not exercised.
Pickup/drop-off selection	**Issue**	ACC-002; field labels sampled; completion untested.
Location announcements	**Partial**	Map marker speech captured around 08:39-08:45; address/value updates untested.
Nonvisual route information	**Not tested**	No route/fare/trip details reached.

Task Completion & User Journeys

Account registration	**Not tested**	Existing logged-in account.
Login	**Not tested**	No authentication flow.
Searching	**Not tested**	Home prompt explored; query/results not exercised.
Booking	**Not tested**	Ride screen reached; no confirmation.
Payment	**Not tested**	Account payment row not activated; no checkout.
Cancellation	**Not tested**	No booking/cancellation.
Confirmation	**Not tested**	No submitted transaction.
Error recovery	**Not tested**	No controlled failure or recovery.

COVERAGE / 4 OF 4

Every requested subtopic is accounted for.

Issue = evidence of a concern. Partial = incomplete check. Not tested is not a failure.

Cognitive Accessibility

Consistent navigation	**Partial**	Common bottom tabs visible; cross-service consistency untested.
Predictable interactions	**Partial**	Several pages opened; no complete controlled task.
Clear instructions	**Issue**	ACC-001/002/003 create naming/interpretation burdens.
Understandable error messages	**Not tested**	No errors induced.
Time limits	**Not tested**	No OTP, timed offer or session-expiry test.

Device & Assistive Technology Compatibility

TalkBack	**Partial**	HONOR X7c, Android 14; version/settings not recorded.
Switch Access	**Not tested**	No switch session.
Voice Access	**Not tested**	No voice-control session.
External keyboards	**Not tested**	No hardware-keyboard session.
Android display settings	**Not tested**	Default recorded appearance; font/display changes untested.
Landscape orientation	**Not tested**	Portrait recording only.

Accessibility Compliance & Reporting

WCAG 2.2 success criteria	**Partial**	Candidate A/AA mappings per finding, interpreted for native software using WCAG2ICT.
Severity ratings	**Documented**	Custom 1-4 user-impact rubric, separate from A/AA/AAA.
Reproducibility	**Partial**	Version/device and steps known; TalkBack version/settings and second run pending.
Evidence collection	**Documented**	Timestamped cropped frames, audio excerpts, source hashes and measurements.
Remediation recommendations	**Documented**	Specific corrections and retest instructions per finding.

DISCUSSION

Interpreting the findings.

Discoverability precedes task completion

The sampled naming issues appear before a user can review fares or submit a booking. This makes accessible labels and useful field values a sensible first remediation priority. The recording still does not prove that booking is impossible.

Common output does not establish a common cause

Identifiers recur across Home, Account and the ride screen. A shared labelling or node-grouping pattern is a hypothesis. TalkBack may also speak element IDs as a fallback for unlabeled buttons. The app property responsible cannot be identified without settings and node evidence.

Focusable is not the same as understandable

Green rectangles show that many controls receive focus. Some service names, tab roles and selected states are spoken. These positive observations establish limited accessibility support, while leaving the quality of individual names and complete workflows unresolved.

Visual and spoken access need separate checks

Improving labels alone will not fix contrast. Darker prompts and readable action fills should be checked alongside font scaling, magnification, focus visibility and other states.

Evidence boundaries protect the conclusions

One build, one device and an uncontrolled exploration cannot support a blanket claim about all PickMe services or all assistive technologies. Untested items should guide the next audit session rather than inflate the failure count.

ASSUMPTIONS AND LIMITATIONS

What the conclusions depend on.

Build match

The installed app version reported by the user matches the supplied XAPK version. A live installation was not independently inspected.

Video continuity

The user confirmed that the YouTube upload is the same untrimmed recording. The YouTube player shows a 9:40 duration and was verified at the linked 04:22 point.

Speech attribution

Repeated transcribed identifiers are treated as screen-reader output associated with the visible exploration. Exact spelling/case and tight alignment are approximate.

Video access

Evidence links open the supplied YouTube recording. The web report embeds the player after a user activates Play here. Availability depends on the video remaining accessible and embedding being allowed.

Contrast sample

Sampled colours represent the recorded appearance, not original design tokens or a calibrated display. Values are estimates.

Potential impact

Likely user difficulties are reasoned interpretations. There is no measured completion rate, time-on-task, or participant preference in this audit.

CONCLUSION

A focused path to better access.

01

The supplied evidence justifies prioritising meaningful spoken names for Account actions and useful labels/values for route fields. It also identifies redundant technical speech on Home and two visual contrast concerns.

02

These five findings are actionable review priorities, with clear evidence, proposed corrections and retest steps. Their certainty is explicitly qualified; this report does not conclude that PickMe entirely lacks accessibility support.

03

A follow-up should confirm screen-reader settings and runtime names, complete destination and fare selection, and extend to authentication, transactions, recovery and other input technologies. No app-wide compliance percentage is assigned.

Next verification session

1. Record TalkBack version and element-ID settings.
2. Confirm Account names and route-field values.
3. Complete destination and fare selection without booking.
4. Check transactions, errors, scaling and other input modes.
